EDUCATION

University of California, Los Angeles

Los Angeles, CA

Bachelor of Science in Computer Science

June 2026

- Relevant Courses: Software Construction, Operating Systems Principles, Data Management Systems, Web Applications, Algorithms and Complexity

EXPERIENCE

Undergraduate Research Assistant

June 2024 – Aug. 2024

Huntington Medical Research Institutes

Pasadena, CA

- * Conducted NSF-funded research focused on deep learning-based Image Analysis for measurements of myocardial risk zone, infarct size, and no-reflow using Pytorch.
- * Implemented an advanced image segmentation model using Mask R-CNN with over 80% accuracy on calculating mass ratio of myocardial affected area.
- * Built a web-based tool to generate contour masks from X and Y coordinates, incorporating data augmentation techniques (rotation, shifting, resizing) to expand datasets and improve model training accuracy.

Software/Hardware Engineer

Sep. 2022 – Jun. 2024

VEX Robotics

Walnut, CA

- * Developed autonomous driving routines for VEX Robotics, utilizing PID controllers and GPS-based navigation for precise movement control.
- * Programmed custom driving functions, including an X-Tank control system for efficient movement using joystick inputs.
- * Designed and built essential robot components using CAD in SolidWorks, including the roller for the object intake system and a robot arm for the self-balancing mechanism.

Information Technology Support Intern

July 2022 – Aug. 2022

Newegg

City of Industry, CA

- * Developed a GUI-based data analysis and visualization tool for IT support ticketing systems, automating the conversion of .csv files into interactive visualizations (charts, tables, bar graphs, dot lines). Built using Python (Tkinter, Matplotlib, Pandas, and NumPy).
- * Integrated visualization tool into daily/monthly reporting process, enabling IT staff to quickly generate data visualizations, improving efficiency and decision-making.

PROJECTS

EventHub | *React, Node.js, Next.js, MongoDB, Zustand, Git*

Jan. 2025 – Mar. 2025

- * Developed a full-stack social event-sharing platform, implementing user authentication, event creation, and search functionalities using Node.js, Express.js, and MongoDB.
- * Designed and built RESTful APIs to handle CRUD operations for events, user registration/login, and notification retrieval.
- * Integrated real-time notifications with WebSockets to provide instant updates on event changes and user interactions.
- * Utilized GitHub for version control and collaboration, managing repositories, tracking issues, and coordinating development through pull requests and code reviews.

TECHNICAL SKILLS

Languages: Python, C/C++, Java, JavaScript, HTML/CSS, SQL (Postgres), MongoDB

Frameworks: React, Node.js, Express.js, Flask, Chakra-UI

Developer Tools: Git, Docker, VS Code

Libraries: pandas, NumPy, Matplotlib, PyTorch, Zustand
